

# Capri Pontoons

The Capri Marina System is a medium duty option ideal for commercial and club marinas. The flotation system is made of hard-wearing polyethylene floats which bolt to the aluminium structure and do not deteriorate in a marine environment. It also incorporates a custom extruded water design that allows for a visually pleasing finish and versatility. The Capri Marina System is easily transportable to site and is quickly assembled. It is container friendly for worldwide shipping.

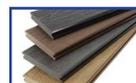

Open areas between flotation modules allow for debris removal and the system has less draft than a concrete system.

The water allows for cleat placement, adjustable positioning of pile brackets, hinges, fingers and fenders, and easy access to all marina service line requirements.

## Technical Specifications:

Max Width (m)	5.0
Max Length (m)	15.0
Max Height (m)	1.2
Net Capacity (Kn / m2)	03
Freeboard (m)	0.6

Timber Deck
